TITLE: Effect of bacterial polysaccharides on the growth of tumors in an experiment  
12

SOURCE: Antibiotiki, v. 10, no. 2, 1965, 134-137

TOPIC TAGS: carbohydrate, tumor, bacteria, mouse, drug effect, electron microscope

ABSTRACT: Investigations established that the development of neoplasms is accompanied by the suppression of the protective powers of the organism, the reticuloendothelial system in particular. This indicates that specific therapy of the tumors should be accompanied by attempts to stimulate the defense system of the organism. With this end in view experiments were conducted to determine the effect of prodigiosin, a polysaccharide preparation obtained from Bacterium prodigiosum -- a nonpathogenic microorganism, on Ehrlich's and sarcoma 180 tumors. Mice were used in the experiments. The intraperitoneal method of administration was found to be the most effective, and was therefore applied throughout the experiment. The drug was administered to the animals in doses of 10 and 50 micrograms at various periods: two hours prior to, and 24, 48, and 72 hours after the implantation

of the tumor. The experiments established that prodigiosin was most effective when administered 24 hours after the implantation of the tumor: doses of 10 micrograms inhibited the growth of sarcoma 180 by 69 percent, while doses of 50 micrograms inhibited the growth of the tumor by 42 percent; its effect on Ehrlich's tumor was more pronounced. Larger doses did not increase the efficacy of the preparation. Electron microscopic and cytochemical investigations established that prodigiosin does not directly affect the tumor cells. It is thought, therefore, that its inhibiting effect on tumor growth is due mainly to the stimulating action of the drug on the protective system of the reticuloendothelial system.

SOV/2888

USSR. Ministerstvo vysshego obrazovaniya

Aspirantura; spravochnik dlya postupayushchikh v aspiranturu i soiskateley uchenykh stepeney (Aspirantura [Graduate Studies]; Handbook for Students Entering Graduate Studies and Seeking an Academic Degree) Moscow, Gos. izd-vo "Sovetskaya nauka," 1958. 328 p. 7,000 copies printed.

Compilers: Antonina Mikhaylovna Yermolyuk and Viktor Ivanovich Smyslov; Eds.: B.N. Yudayev and I.A. Kolpakov; Ed. of Publishing House: L.N. Pan'shina; Tech. Ed.: V.A. Pavlova.

**PURPOSE:** This book is intended for the academic community. It will be of interest to professional, scientific, and technical personnel insofar as they are concerned with the educational programs in Soviet higher schools leading to advanced degrees.

**COVERAGE:** This book presents a comprehensive survey of the curriculums, admission requirements, testing procedures, and degree-granting practices at Soviet schools of higher education. The rules governing the aspirantura, or graduate study, program are set forth in

Card 1/14

Aspirantura [Graduate Studies](Cont.)

SOV/2888

Soviet State directives. The major fields in which advanced degrees may be obtained are listed. Various academic and research institutes at the All-Union and at the Republic level are given and their powers to grant degrees defined. The programs of study and fields of specialty available at various universities and institutes are listed and the different academic titles and degrees discussed. Required political readings for graduate students are also included. No personalities are mentioned. No references are given.

SOV/27-58-12-19/23

AUTHOR: Yermoshin, T.<sup>F</sup> In Charge of the Mechanization Workshop

TITLE: Workshop of Mechanization of Animal Husbandry (Kabinet mekhanizatsii zhivotnovodstva)

PERIODICAL: Professional'no-tekhnicheskoye obrazovaniye, 1958<sup>15</sup> Nr 12, pp 25-26 (USSR)

ABSTRACT: The ~~Rechnovskoye School~~ of Agricultural Mechanization Nr 1, Gor'kiy Oblast', is located in the vicinity of 2 large kolkhozes (imeni Lenin and imeni Stalin). The workshop for the mechanization of animal husbandry is the most active link in relations between the school and the kolkhozes. As it is, the school becomes familiar with the engineering methods used in farm work prior to the kolkhozes. Accordingly, when assigned to the kolkhoz for work, the students already have some experience. The author quotes a few cases where students demonstrated their ability. He describes an automatic device for providing cattle with warm water (using feed boiler ZK-1). He outlines how the workshop participated in the cattle-breeders' endeavors to reduce losses of newly born animals by using biological stimulants such as vitamins, ultra-violet irradiation, etc. He refers to the 4th All-Union Conference on Vitamins

in spring 1957, where reports were delivered by representatives of the Institut biokhimii Akademii nauk SSSR (Institute of Biochemistry of the USSR Academy of Sciences), the Moskovskaya veterinarnaya akademiya (Moscow Veterinary Academy) and the Latviyskiy institut zhivotnovodstva i veterinarii (Latvian Institute of Animal Husbandry and Veterinary Science) on emulsions of vitamins A, D and E. These vitamin emulsions were tested at the dairy farm of the Konesovkhoz Nr 23 (State Stud Farm Nr 23) and at the ~~Pochinkovskoye~~ Incubator Station. By utilizing the plans of Chief Engineer Iu. Snkatov of the Balakleyskaya MTS, published in the journal "Mashinotraktornaya stantsiya" Nr 3, 1958, the workshop has rebuilt the feed boiler for liquid fuel operation. There is 1 photo.

TITLE: Method of compensating for the aerodynamic asymmetry of propeller aircraft.  
Class 62, No. 182528

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 11, 1966, 140

TOPIC TAGS: aerodynamic control, gas turbine engine, aircraft auxiliary engine, asymmetric body

ABSTRACT: An Author Certificate has been issued for a method of compensating for the aerodynamic asymmetry of propeller aircraft. For the purpose of increasing flight safety and simplifying flying technique, aerodynamic asymmetry is decreased by the thrust of an auxiliary gas-turbine engine (1). This creates a moment opposite

Abstract : By removal of tics from cattle, cases of copulation between the male *Rh. sanguineus* and male *B. calcaratus*, which was occurring when there was an insufficient number of male *Rh. sanguineus* on the host-animal. The observed case of inter-species copulation is interesting from the point of view of study of problems of hybridisation of tics of Ixodidae family.

Title : New Growth of Injured Root Systems in One-Year Old Seedlings of the Rosemarine Apple Variety.

Orig Pub : Sots. s. kh. Uzbekistana, 1957, No 3, 60-64

Abstract : The most intensive two periods in the growth of the damaged roots of the White Rosemarine apple tree seedlings were determined: In June and between the second half of August and the first half of September. The least growth was observed between the second half of July and the first half of August. In fall, September-October, the regenerative ability of the roots dwindles. Roots cut off in November did not produce any new formations during the winter but a callus was formed at the points of the cuts. The roots were cut off from two and four sides (in the
